Education

Carnegie Mellon University Pittsburgh, PA
Bachelor of Science in Artifical Intelligence, Additional in Business *Expected May 2028*

Experience

AI Engineering Intern May 2026 – Aug. 2026
Humana *Louisville, KY*

- Streamlined Medical Assistant workflows by 33% by developing multimodal RAG pipelines using Google ADK
- Consolidated patient data and charts into Athena EMR using FastAPI and Snowflake MCP
- Increased patient throughput by 6% by implementing LangChain and LangGraph agents into MA workflow
- Improved veteran healthcare data integration by creating API endpoints for Humana Military TRICARE
- Presented in final showcase to senior leadership and stakeholders

Machine Learning & Data Science Intern May 2025 – Aug. 2025
Drippy.ai

- Improved personalized learning recommendations by 28% by developing NLP and computer vision models in PyTorch for AI-driven e-learning tools
- Reduced data processing time by 35% by building analytics workflows with Redis and NumPy on educational data
- Increased platform engagement by 18% by helping deploy and optimize scalable end-to-end machine learning inference pipelines

Machine Learning Research Assistant May 2024 – July 2024
Grand Canyon University *Phoenix, AZ*

- Developed a real-time ASL gesture translation system using OpenCV, MediaPipe, and PyTorch
- Applied Gaussian blur and thresholding techniques to improve hand segmentation and gesture feature extraction
- Integrated EEG signal data with gesture recognition pipelines for BCI-focused multimodal classification research
- Improved sign recognition accuracy by 25% by training an RNN classifier on temporal gesture sequence data
- Authored a 7-page research paper and presented findings at the Arizona Association of the Deaf State Conference

Projects

TranscriptFlow | *Go, Python, React, PostgreSQL, Redis, Docker* May 2025 – Present

- Built a YouTube transcript SaaS in Go (Chi) + React with a 3-layer pipeline: Redis cache, YouTube caption scraping, and yt-dlp + Faster-Whisper audio fallback
- Implemented dual auth — JWT (plan-gated) for web sessions and SHA-256-hashed developer API keys, both resolved via Chi middleware
- Deployed async job processing with Asynq (Redis-backed) and a standalone worker binary managing a pending → processing → completed/failed state machine with retries
- Integrated Stripe subscription billing with HMAC-validated webhooks promoting users between Free and Pro plans on payment and cancellation events

reDoors | *Go, React, PostgreSQL, Redis, Docker* Sept. 2025 – Present

- Built a P2P outdoor gear marketplace in Go (Chi) + React with listing creation, PostgreSQL `tsvector` full-text search, and condition/price filtering
- Implemented real-time buyer–seller chat via Redis Pub/Sub + WebSocket relay, with history in PostgreSQL and unread counts cached in Redis
- Integrated Stripe Connect escrow — funds released to seller on buyer confirmation, with HMAC-validated webhooks for disputes and refunds

Technical Skills

Languages: Python, C/C++, GoLang, HTML/CSS, R
Frameworks: FastAPI, Claude SDK, Google ADK, PostgreSQL, Redis, LangChain, LangGraph
Developer Tools: Git, Docker, VS Code, Visual Studio, Vim, Claude Code, Codex, Cursor, Github, Jenkins
Libraries: pandas, NumPy, Matplotlib, OpenCV, PyTorch

Fully work authorized. No visa sponsorship required. US Citizen.
